

HAMID KHAN

Technology Operations & Infrastructure Executive | SRE & Platform Engineering | AI-Driven Operations
Minneapolis, MN | hamid.khan4153@gmail.com | linkedin.com/in/hamid-m-khan-b2042654

EXECUTIVE PROFILE

Technology operations executive with 20+ years running mission-critical, regulated platforms, from mainframe to hybrid cloud, for global financial services and national retail. Leads global organizations of 65+ engineers and contractors across SRE, infrastructure, mainframe, storage and service management. Built governed AI operations, including autonomous AI patching, AI agents and MCP gateways, protected by LLM-as-a-judge controls and guardrails that allow safe automation in SOX, PCI-DSS and NIST environments. Two-time IBM Champion (2025 & 2026) and MIT Product Management Program graduate.

SELECTED ACHIEVEMENTS

~80% reduction in production incidents through automation and intelligent operations at FICO

\$1.5M annual savings, plus ~\$5M in cost avoidance from the IBM ZOPD program for ISVs

AI-driven autonomous patching across mainframe, UNIX, Linux and Windows servers: patch cycle cut from a week to hours, with 100% compliance

Zero-disruption migration of 70+ critical application and database servers at Kohl's

CORE EXPERTISE

Infrastructure & Platform Strategy · SRE & Reliability Engineering · AI-Driven Operations & Governance · IT Service Management (ServiceNow) · Observability & AIOps · Disaster Recovery & Business Continuity · Hybrid Cloud & Mainframe · Budget, Vendor & Contract Management · Regulatory Compliance · Global Team Leadership

PROFESSIONAL EXPERIENCE

FICO - San Diego, CA (Remote)

Senior Digital Transformation Leader, End-to-End Technology Operations | May 2019 - Present

Leads availability, resilience, security and modernization of FICO's customer-facing decision intelligence platforms, which support global financial operations. Runs an organization across 3 continents and 4 countries: 10 direct reports, 57+ contractors.

Leadership & Financial Impact

Deliver \$1.5M in year-over-year savings through infrastructure optimization, vendor consolidation and disciplined resource strategy.

Secured approval for IBM's ZOPD program for ISVs (IBM Z on-premises development program), generating ~\$5M in savings.

Own budget planning, vendor relationships, contracts and SOW oversight across enterprise tooling and third-party engineering services.

Advise product, architecture and C-suite leaders, turning operational risk into roadmaps and investment decisions.

AI & Intelligent Automation

Designed and deployed AI-driven autonomous patching across mainframe, UNIX, Linux and Windows estates. It runs pre-checks, decides patch order using telemetry, validates health after patching, and rolls back automatically. Patch cycle dropped from days to hours, compliance reached 100%, and 80 engineer hours per month were freed up.

Built governance guardrails for autonomous actions: LLM-as-a-judge validation, architectural fitness functions and approval gates that every automated change must pass first. Result: zero automation-caused incidents.

Built AI agents and MCP gateways/servers that connect ServiceNow, Splunk and Datadog telemetry to operational workflows, automating triage/remediation tasks and cutting MTTR.

Lead ServiceNow platform strategy and AI integration for service automation.

Reliability & Resilience

Implemented automation and SRE practices that cut ~80% of incidents.

Architect the observability ecosystem (Splunk, Datadog, AppDynamics), improving detection time by 90% and enabling proactive resolution.

Own enterprise DR strategy across hybrid, multi-platform environments: RTO/RPO, business impact analysis, failover playbooks and tested recovery. Achieved 100% DR test success.

Lead SEV1/SEV2 incident command and executive escalation, crisis communications and root-cause analysis.

Platform & Compliance

Drive CI/CD and Infrastructure-as-Code (Terraform, Ansible, Puppet, Jenkins) across UNIX, Linux, Windows, mainframe and converged infrastructure, with compliance to SOX, PCI-DSS and NIST.

CHARLOTTE RUSSE INC. - San Diego, CA

Senior Technology Leader | Oct 2012 - Apr 2019

Led enterprise infrastructure, data center transformation and business continuity for a national retailer with 500+ stores.

Directed end-to-end data center migration and modernization, including physical relocation and transition to Microsoft Azure, on schedule.

Architected infrastructure across RHEL, Windows, VMware, Nutanix and EMC VMAX, supporting SAP HANA, Oracle and the data warehouse.

Owned business continuity and DR for 500+ locations: recovery objectives, technical workbooks and tested failover.

Ensured PCI and SOX compliance through audits, standards enforcement and operational controls.
Managed vendors and developed junior and mid-level engineers.

KOHL'S DEPARTMENT STORES - Menomonee Falls, WI

Senior Platform Managing Engineer | May 2010 - Sep 2012

Led the zero-disruption migration of 70+ critical application and database servers from AIX 5.x to IBM p7-770, delivered on schedule with no production impact.

Designed VMware vCloud, GPFS/GFS and HACMP clustering solutions and automated MQ upgrades for 24/7 high-availability retail systems supporting SAS, Oracle, DB2, WebLogic and WebSphere.

TECHNOLOGY

AI & Automation: AI Agents · MCP Gateways/Servers · LLM-as-a-Judge · AIOps · Autonomous Patching · Terraform · Ansible · Puppet · Jenkins · GitOps · JFrog Artifactory

Infrastructure & Cloud: AWS (incl. Amazon EVS) · Microsoft Azure · VMware · Nutanix · Kubernetes · OpenShift · Docker

Platforms: IBM Mainframe (Z) · AIX · RHEL · SUSE · Windows Server · Enterprise Storage & SAN

Observability & ITSM: Splunk · Datadog · AppDynamics · ServiceNow

Enterprise Apps & Security: SAP HANA · Oracle · DB2 · WebSphere · WebLogic · MQ · Okta · Infoblox · SOX · PCI-DSS · NIST

RECOGNITION & EDUCATION

IBM Champion - 2025 & 2026

MIT Professional Education - Product Management Program

Wichita State University - Masters

Wichita State University - Bachelor of Science
